

**“The Terminal”
Creative Brief
for Polygon Labs**
by Andy Zou

Creative Brief & Narrative

I ultimately went with this concept because I wanted a relatable metaphor for the current financial system. And what's more frustratingly relatable than the bureaucracy of waiting at an airport? Who hasn't looked with envy at the express lines as they were stuck in queue after queue?

By following a dollar attempting to travel across the world, we can "show, not tell" a playful, metaphorical comparison of the present versus the future that Polygon Labs is building.

Target Audience and Objectives

The target audience for this flagship spot is everyday users looking for faster global payments and access to alternative digital assets.

Their takeaway should be that the current financial system is stuck in the slow lane, and Polygon is where money (and more) is moving at modern speeds.

INT. KITCHEN - DAY

JOHN, a nebbish middle-aged man, picks up his ringing phone.

JOHN
Hey sweetie, how's London?

EXT. LONDON STREET - NIGHT

In the city street, timezones away, his daughter:

OLIVIA
It's good! But, I was wondering...
my friends wanted to go on a trip
next weekend, could you send me
some cash?

INT. KITCHEN - NIGHT

JOHN
Haha, oh, I see. I'll transfer it
right now. Might take some time,
though.

He taps on his phone and hits TRANSFER. The click of the button TRANSFORMS into a SURGE OF LIGHT speeding into the internet. We follow that burst of bright light into...

INT. THE TERMINAL - DAY

Travelers hustle and bustle through a busy airport terminal as a man, BUCK, slides out of a chute with a BRIEFCASE OF DOLLARS. He is the personification of money traveling across the world. He strides up to the counter where a TICKET AGENT waves him up.

AGENT
Destination?

BUCK
London.

AGENT
Hm, let me see...best I can do for
you is a 5 day layover.

BUCK
5 days?

AGENT
Yeah, sorry. Holiday weekend,
banking hours, plus settlement,
KYC, AML, CYA. You know? Better
get in line.

Buck, bewildered, turns to leave.

AGENT (CONT'D)
Sorry, new bag fee, too.

Buck reluctantly opens his suitcase and hands over some cash.

INT. TERMINAL SECURITY - DAY

Buck gets into the back of a long line behind another man, STERLING.

BUCK
What's the hold up here?

STERLING
(Shrugging)
Security, supposedly.

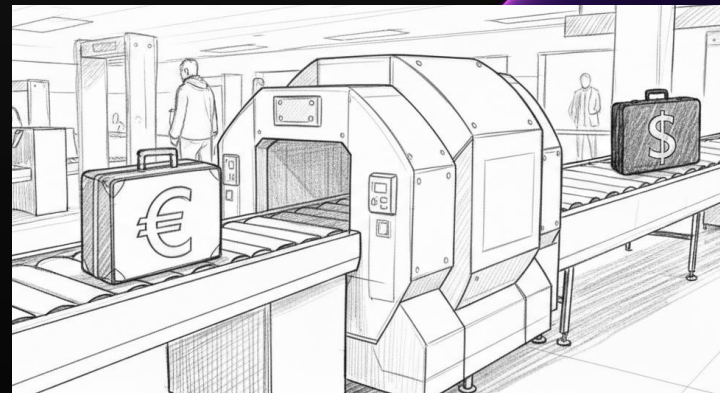

BUCK
How's the exchanger today?

At the front of the line, a man places a LARGE DOLLAR BRIEFCASE thru a machine. A SMALLER EURO BRIEFCASE slides out of the machine. He frowns as he takes the smaller suitcase away.

STERLING
Not so good today. Depends on
where you're going, I guess.

BUCK
Going to London. Guess I'll have
to lose a few pounds, haha!

STERLING
Haven't heard that one before.

As Buck nervously chuckles, he sees what seems like an express line with people striding through at a clip, being waved through.

BUCK

Hey, what's that line over there?

STERLING

Oh, that? They're flying tokenized class. Supposedly they can get there in seconds.

People are lugging all sorts of things through that line. Trading cards. Sculptures. Blocks of gold.

BUCK
Huh. Wonder if I should get
tokenized.

STERLING
Why? We're fine waiting right here.

Before Buck can respond, he sees a man driving a vintage car
through the express line.

BUCK
Is that...?

STERLING
Yeah, you'd be surprised what they
can tokenize these days.

ENDCARD WITH POLYGON LOGO: Can your money do that?

Can your money do that?

 polygon Labs

Execution Strategy, Timelines, & Resources

The ideal execution strategy for this concept would involve a modest crew on-location with production value befitting a high-profile fintech campaign (mid-5 figures).

Alternatively, many elements can be rewritten to be producible on a smaller scale by leveraging green screen and other post-production techniques to substantially reduce costs.

Lead time would be ~2 months for casting, locations, and pre-production, ~1-2 months for post-production.
